

$$L_k(x) = \prod_{\substack{i=0 \\ i \neq k}}^n \frac{x - x_i}{x_k - x_i}$$

x	-2	-1	0	1	2	3
$p(x)$	-5	1	1	1	7	25

BY THE UNIFORMITY THEOREM FROM LECTURE NOTES 21 ($\dots p(x) = q(x) \dots$),

$$L_k(x) = \prod_{\substack{i=0 \\ i \neq k}}^n \frac{x - x_i}{x_k - x_i} = p(x) \quad \text{FOR SOME } n \leq 5,$$

$$X = \{x_0 = -2, x_1 = -1, x_2 = 0, x_3 = 1, x_4 = 2, x_5 = 3\}$$

$$p(x) = \{-5, 1, 1, 1, 7, 25\}$$

OTHERWISE $p(x)$ DOES NOT HAVE DEGREE n

→ $n = 8$

$$L_k(x) = 0 \neq p(x) \rightarrow 1 \leq n \leq 5$$

$n = 1$

$$L_0(x) = \frac{x - x_1}{x_0 - x_1} = \frac{x + 1}{-2 + 1} = -x - 1$$
